PROFILE

Software engineer with seven years shipping production Python, Linux, and distributed-systems work across Google, Bloomberg, and Edgestream. Current focus: **agentic-AI developer tooling** — architecting **sase**, a multi-agent software-engineering toolkit that orchestrates Claude Code, Gemini CLI, and Codex into a managed pipeline, translating recent agentic-coding research into a tool used daily for real engineering work.

EDUCATION

Rutgers University

B.S. Computer Science (minor in Mathematics)

New Brunswick, NJ
September 2015 – May 2019

EXPERIENCE

Google

Software Engineer

Manhattan, NY
June 2022 – present

- Full-stack engineer on Google Ad Manager; Java on the backend, Dart / AngularDart / Sass on the frontend.

Bloomberg L.P.

Site Reliability Engineer / Senior Software Engineer

Manhattan, NY
January 2021 – May 2022

- Founding engineer on the Compliance SRE (CSRE) team; technical lead across the team's Python portfolio.
- Maintained Bloomberg's firm-wide Python cookiecutter, shaping new-project scaffolding across the company.
- Authored the "ChangeLog Driven Release" (CLDR) methodology; adopted in alpha across the Compliance department.

Edgestream Partners, L.P.

Software Engineer

Princeton, NJ
May 2019 – January 2021

- Led integration of `pylint` into a 1M+ line Python trading codebase; built the supporting tooling to make it stick.
- Lead developer of Edgestream's Django-based investor-facing web portal.
- Delivered large-scale improvements to the production team's in-house testing framework and test runner.

Comcast

Tier III Technical Support

Mount Laurel, NJ
2011 – 2016

- Diagnosed large-scale network outages; automated recurring team workflows (ticketing, spreadsheet parsing, info retrieval) with Python.

SKILLS

AI / Agentic Systems

Claude Code · Gemini CLI · Codex · prompt engineering · LLM orchestration · multi-agent workflow design

Primary

Python · Linux · TCP/IP networking · Bash

Working

C/C++ · Rust · Perl · Java · JavaScript · Haskell · Vimscript

Tools

Docker · Git · PostgreSQL · Redis · $\text{\LaTeX}$ · Vim · Prometheus / Grafana

Frameworks

Django · FastAPI · Flask · Pluggy · ZeroMQ · Textual

SELECTED PROJECTS

sase — Structured Agentic Software Engineering

Multi-agent toolkit orchestrating Claude, Gemini, and Codex.

Python
2025–present

- Architected the full system: **ACE** (multi-agent supervision TUI built on Textual), the **AXE** daemon, and a YAML-driven workflow engine that turns natural-language prompts into structured, multi-step agentic work.
- Built a pluggy-based plugin system for VCS / workspace integrations (Git, GitHub, Chezmoi, Telegram, Gemini, Neovim), Prometheus telemetry surfacing 33 pipeline metrics, and a bead-based issue tracker for agent-owned task queues.

- Grounded in current agentic-coding research (Hassan et al. 2025; Vaziri et al. 2024) — translating paper ideas into tools I ship software with daily.

python-boltions/*

Python
2021–present

Python libraries we think should be “builtins”.

- Founder and lead developer of this series of projects. Notable boltions:
 - cc-python (cookiecutter)
 - eris (error-handling lib)
 - logrus (logging lib)
 - clack (config CLI lib)
 - hush (plugin secrets lib)

psf/black

Python
2019–2021

The uncompromising Python code formatter.

- Rewrote black’s string-handling logic (~3,500 LoC) in [PR #1132](#); closed five unrelated user-filed issues in one shot.

bbugyi200/funky

Python, Shell
2017–2021

Makes shell functions easier to define, more flexible, and more interactive.

- 500+ GitHub stars; accepted multiple external contributions (issues, bug reports, code).

bbugyi200/*

Python, Rust, Shell
2017–present

Miscellaneous open-source projects on GitHub.

- greatday (GTD todo manager) · cldr (ChangeLog Driven Releases) · shv (Rust shell-history viewer) · cookie (templated file generator, 250+ stars).
