Bryan Bugyi

Software Engineer
Agentic-AI Developer Tooling

Email bryanbugyi34@gmail.com • Phone (609) 500-7081 • GitHub bbugyi200 • LinkedIn bryan-bugyi

PROFILE

Software engineer with seven years shipping production Python, Linux, and distributed-systems work across Google, Bloomberg, and Edgestream. Current focus: **agentic-AI developer tooling** — architecting **sase**, a multi-agent software-engineering toolkit that orchestrates Claude Code, Gemini CLI, and Codex into a managed pipeline, translating recent agentic-coding research into a tool used daily for real engineering work.

EDUCATION

Rutgers University — New Brunswick, NJ
B.S. Computer Science (minor in Mathematics) — September 2015 – May 2019

EXPERIENCE

Google — Manhattan, NY
Software Engineer — June 2022 – May 2026

- Full-stack engineer on Google Ad Manager; Java on the backend, Dart / AngularDart / Sass on the frontend.

Bloomberg L.P. — Manhattan, NY
Site Reliability Engineer / Senior Software Engineer — January 2021 – May 2022

- Founding engineer on the Compliance SRE (CSRE) team; technical lead across the team's Python portfolio.
- Maintained Bloomberg's firm-wide Python cookiecutter, shaping new-project scaffolding across the company.
- Authored the "ChangeLog Driven Release" (CLDR) methodology; adopted in alpha across the Compliance department.

Edgestream Partners, L.P. — Princeton, NJ
Software Engineer — May 2019 – January 2021

- Led integration of `pylint` into a 1M+ line Python trading codebase; built the supporting tooling to make it stick.
- Lead developer of Edgestream's Django-based investor-facing web portal.
- Delivered large-scale improvements to the production team's in-house testing framework and test runner.

Comcast — Mount Laurel, NJ
Tier III Technical Support — 2011 – 2016

- Diagnosed large-scale network outages; automated recurring team workflows (ticketing, spreadsheet parsing, info retrieval) with Python.

SKILLS

AI / Agentic Systems	Claude Code · Gemini CLI · Codex · prompt engineering · LLM orchestration · multi-agent workflow design
Primary	Python · Linux · TCP/IP networking · Bash
Working	C/C++ · Rust · Perl · Java · JavaScript · Haskell · Vimscript
Tools	Docker · Git · PostgreSQL · Redis · LaTeX · Vim · Prometheus / Grafana
Frameworks	Django · FastAPI · Flask · Pluggy · ZeroMQ · Textual

SELECTED PROJECTS

sase — Structured Agentic Software Engineering — Python
Multi-agent toolkit orchestrating Claude, Gemini, and Codex. — 2025–present

- Architected the full system: **ACE** (multi-agent supervision TUI built on Textual), the **AXE** daemon, and a YAML-driven workflow engine that turns natural-language prompts into structured, multi-step agentic work.
- Built a `pluggy`-based plugin system for VCS / workspace integrations (Git, GitHub, Chezmoi, Telegram, Gemini, Neovim), Prometheus telemetry surfacing 33 pipeline metrics, and a bead-based issue tracker for agent-owned task queues.

- Grounded in current agentic-coding research (Hassan et al. 2025; Vaziri et al. 2024) — translating paper ideas into tools I ship software with daily.

python-boltons/* `Python`
Python libraries we think should be “builtins”. 2021–present

- Founder and lead developer of this series of projects. Notable boltons:
  - cc-python (cookiecutter)
  - eris (error-handling lib)
  - logrus (logging lib)
  - clack (config CLI lib)
  - hush (plugin secrets lib)

psf/black `Python`
The uncompromising Python code formatter. 2019–2021

- Rewrote black’s string-handling logic (∼3,500 LoC) in PR #1132; closed five unrelated user-filed issues in one shot.

bbugyi200/funky `Python, Shell`
Makes shell functions easier to define, more flexible, and more interactive. 2017–2021

- 500+ GitHub stars; accepted multiple external contributions (issues, bug reports, code).

bbugyi200/* `Python, Rust, Shell`
Miscellaneous open-source projects on GitHub. 2017–present

- `greatday` (GTD todo manager) · `cldr` (ChangeLog Driven Releases) · `shv` (Rust shell-history viewer) · `cookie` (templated file generator, 250+ stars).
